Thu, 07 Jun 2018 22:08:00 GMT - Like PostScript, the PDF graphic description "language" is using stacks and it uses the inverted "Polish notation" for expressions: operators come last, arguments for operators come first. To express "1 + 2" you'd write "1 2 add" in PostScript. PDF is hardly "line based".

Sat, 09 Jun 2018 21:29:00 GMT - applying the operator remains an element of  $L^2[a,b]$ . We will usually restrict the set of functions even further, by imposing boundary conditions at the endpoints of the interval. A linear differential operator is now defined as a formal linear differential operator, together with a specification of its domain  $D$ .
